

MIT 103

Advanced Systems Analysis, Design & Implementation

Week 1 · Course Orientation

College of Engineering and Computational Sciences

Master of Information Technology · Partido State University

Instructor: Rowell John B. Artiaga

Today's Roadmap

Five stops on our first-day tour of MIT 103

1

Who We Are

PARSU's vision, mission, and core values

2

Course Profile

What this course is, and how it's delivered

3

The Learning Journey

18 weeks, at a glance

4

How You're Graded

The grading breakdown, explained

5

A Practical Preview

The case study we'll build on all semester

University Vision & Mission

What Partido State University stands for — and why it matters to your field of study

VISION

A university of science and technology advancing geology and bio-resource science to promote sustainable and resilient communities.

MISSION

To provide a high-quality, global educational experience to educate individuals in leadership, innovation, critical thinking, cultural appreciation and civic responsibility — so graduates are competent, informed, and environmentally and culturally proactive citizens.

Our Core Values

PSU — the values every PARSU graduate carries into their profession

P

Passion for Excellence

Pursuing quality and mastery in everything we do — in class, in research, and in practice.

S

Service

Using our expertise to genuinely serve stakeholders, communities, and the profession.

U

Unity & Inclusiveness

Working across teams and differences to build solutions that include everyone.

Quality Policy & College Goal

University Quality Policy

Partido State University commits to provide quality instruction, responsive research, and needs-based extension services for global competitiveness and stakeholder satisfaction — through continual improvement of the quality management system.

College Goal — CECS

The College of Engineering and Computational Sciences aims to produce globally competitive graduates with high ethical standards, committed to mathematical and technological advancement, sustainable environments, and resilient infrastructure.

Course Profile

The essentials — what, how many units, and how it's delivered

COURSE CODE

MIT 103

CREDIT UNITS

3 units (2 lec + 1 lab)

PREREQUISITE

None

MODE OF DELIVERY

Blended

PLATFORM

Google Classroom

PROGRAM

Master of IT · CECS

What This Course Covers

From understanding the problem to evaluating the finished system

Emphasis on structured and agile approaches, quality criteria, usability, and systems thinking — so your designs align technical solutions with real stakeholder needs.

Course Outcomes

By the end of the semester, you will be able to...

CO1

Analyze complex organizational processes and derive defensible system requirements.

CO2

Develop architectural, process, and data models that support robust information system design.

CO3

Design and implement scalable, user-centered, and maintainable information systems solutions.

CO4

Evaluate system alternatives and implementation strategies using quality and feasibility criteria.

CO5

Collaborate with stakeholders in planning, validating, and refining system solutions.

The 18-Week Journey

Six phases from orientation to final implementation

WK 1–2

Foundations

Orientation; systems, roles & methodologies

WK 3–6

Requirements

Modeling, interviews, sampling, prototyping
& RAD

WK 7–9

Analysis

Data flow diagrams, data dictionaries,
midterm exam

WK 10–13

Design I

Process specs, output design, input design

WK 14–17

Design II

HCI, interfaces, data entry & validation

WK 18

Wrap-Up

Quality assurance, implementation, final
exam

How You'll Be Graded

Laboratory classes grading breakdown

40%

Laboratory / Performance

Skills, outputs, and projects

Attendance & conduct

Final Grade = (Final term × 50%) + (Midterm × 50%)

A Practical Preview

Our running case study: the PARSU Student Clinic Appointment System

The Problem

Students queue on paper logs to see the campus clinic. Records are scattered, and peak hours cause long waits with no visibility into availability.

Our Role

Every week, we'll apply that week's technique to this same case — gathering requirements, modeling data flow, and designing outputs and interfaces.

Where We're Headed

By finals, each team will hand in a working system proposal and prototype — a portfolio piece grounded in a real campus need.

Classroom Expectations

The ground rules that keep our blended classroom running smoothly

Attendance & Punctuality

Maintain a high attendance rate per the student handbook.

ID & Uniform

Required for all students on campus.

Academic Integrity

Plagiarism and vandalism are strictly prohibited.

Phones on Silent

Muted or Do Not Disturb, unless the teacher allows use.

Check Google Classroom

Announcements, updates, and materials posted regularly.

On-Time Submission

Outputs, activities, and requirements are due as scheduled.

Before Next Class

Three quick things to set you up for success

Read the full syllabus

Review course outcomes, schedule, and grading policy in your own time.

Join Google Classroom

Confirm enrollment on our GClassroom code so you never miss an update.

Come prepared for Week 2

Topic: Systems, Roles, and Development Methodologies (SDLC, Agile, OOSAD).

Questions?

Let's build something great together this semester.
